

Railroad Step Gauge

Takes the Guesswork Out of Lining Up Your Welds

SCALE: INCH

Cat # Railroad Step Gauge

The Railroad Step Gauge, from G.A.L. Gage Company, makes crowning rail ends and calibration easier -- in conjunction with an Adjustable Straight Edge.

Composed of stainless steel and resistant to glare, the Railroad Step Gauge will simplify the pre-calibration / post-calibration procedures to save both time and welding material.

The easily to read markings are broken down into two subsets for pre-calibration and finished dimensions. The markings, in accordance with the American Association of Railroads, take the guesswork out of lining up your welds.
